International Journal of Microwave and Millimeter-Wave Computer-Aided Engineering

Contents

VOLUME 1, 1991

Issue 1, January 1991

Special Issue:
State-of-the-Art in Microwave CAD: Part 1

Editorial, 1–3
K. C. Gupta

Microwave and Millimeter-Wave Device and Circuit Design Based on Physical Modeling, 4–21
C. M. Snowden

Nonlinear Circuit Analysis Using the Method of Harmonic Balance—A Review of the Art. Part I. Introductory Concepts, 22–37
R. J. Gilmore and M. B. Steer

The Effects of Electromagnetic Coupling on MMIC Design, 38–47
M. Goldfarb and A. Platzker

Accurate Numerical Modeling of Microstrip Junctions and Discontinuities, 48–58
D. I. Wu, D. C. Chang, and B. L. Brim

CAD for Statistical Analysis and Design of Microwave Circuits, 59–76
J. Purviance and M. Meehan

Automatic Testing of MMIC Wafers, 77–89
I. Bahl, G. Lewis, and J. Jorgenson

Computer-Aided Manufacturing of Advanced Microwave Modules, 90–111
A. M. Pavio, J. S. Pavio, J. E. Chapman, Jr., and G. H. Boggan

MIC Simulation Column, 112–113
Coordinated by Inder J. Bahl

Issue 2, April 1991

Special Issue:
State-of-the-Art in Microwave CAD: Part II

Editorial, 115–116
K. C. Gupta

From Static Approximations to Full-Wave Analysis: The Analysis of Planar Line Discontinuities, 117–142
Ingo Wolff

MESFET Models for Microwave CAD Applications, 143–158
R. J. Trew

Nonlinear Circuit Analysis Using the Method of Harmonic Balance—A Review of the Art. II. Advanced Concepts, 159–180
Rowan J. Gilmore and Michael B. Steer

Computer-Aided Analysis of Nonlinear Microwave Circuits Using Frequency-Domain Nonlinear Analysis Techniques: The State of the Art, 181–200
Michael B. Steer, Chao-Ren Chang, and George W. Rhyne

Modern Perspectives in Supercomputer-Aided Microwave Circuit Design, 201–224
Vittorio Rizzoli, Alessandro Lipparini, Alessandra Costanzo, Claudio Cecchetti, Andrea Neri, Franco Mastri, Fiorella Sgallari, and Valeria Frontini

Radiation from Microstrip Circuits: An Introduction, 225–235
Fred E. Gardiol

A Comparison of CAD Models for Radiation from Rectangular Microstrip Patches, 236–248
David R. Jackson and Jeffery T. Williams

MIC Simulation Column, 249–250
Coordinated by Inder J. Bahl

Call for Papers: Special Issue on Electromagnetic Simulation of Planar Microwave and Millimeter-Wave Circuits

Issue 3, July 1991

Editorial, 251–252
K. C. Gupta

The Relationship between Bivariate Volterra Analysis and Power Series Analysis with Application to the Behavioral Modeling of Microwave Circuits, 253–262
Philip J. Lunsford II and Michael B. Steer

Statistical Analysis of GaAs MESFET S-Parameter Equivalent-Circuit Models, 263–270
R. Anholt, R. Worley, and R. Neidhard

Relationship between Process and Materials Variations and Variations in S- and Equivalent-Circuit Parameters, 271–281
R. Anholt, J. King, R. Worley, and J. Gillespie

A De-Embedding Algorithm for Electromagnetics, 282–287
James C. Rautio

The Computer-Aided Design of Microwave Matching Networks, 288–305
Stephen E. Sussman-Fort

Synthesis of Equivalent Circuits for Inductive Strips in Homogeneous Finline: $W/b = 1$, 306–314
Jeffrey B. Knorr

MIC Simulation Column, 315–325
Coordinated by Inder J. Bahl

Erratum, 327

Call for Papers: Special Issue on Electromagnetic Simulation of Planar Microwave and Millimeter-Wave Circuits, 329

Issue 4, October 1991

Editorial, 331–332
K. C. Gupta

A New Method for Computing the Reaction between Two Rooftop Basis Functions in a Planar Structure, 333–345
Steven L. Dvorak and Edward F. Kuester

Full Wave Solution of Dielectric Loaded Waveguides and Shielded Microstrips Utilizing Finite Difference and the Conjugate Gradient Method, 346–357
V. Narayanan, M. Manela, R. K. Lade, and T. K. Sarkar

A Generalized Analysis Method for Microwave Circuits with Diodes, 358–364
Han Liang, Wang Yunyi, and Li Sifan

Application of a Simplified Real-Frequency Synthesis Method to Distributed-Element Amplifier Design, 365–378
R. Soares, A. Perennec, A. Olomo Ngongo, and P. Jarry

Experimental Validation of Electromagnetic Software, 379–385
James C. Rautio

Adapting Available Finite Element Structural Programs to Solve Three-Dimensional High Frequency Electromagnetic Problems, 386–394
E. A. Navarro, J. M. Femenia, and V. Such

A Circuit Model for the Inductive Strip in Homogeneous Finline, 395–402
Jeffrey B. Knorr and Michael L. Morua

Effects of Packages on Parasitic Coupling among Microstrip Discontinuities in MMICs, 403–411
Albert Sabban and K. C. Gupta

MIC Simulation Column, 412–419
Coordinated by Inder J. Bahl

Book Review Column
Algorithms for Computer-Aided Design of Linear Microwave Circuits, by Stanislaw Rosloniec, 420–421
Reviewed by Mohamed D. Abouzahra

Call for Papers: Special Issue on Modeling of MESFETs and HEMTs for Microwave CAD, 422

Call for Papers: Special Issue on Electromagnetic Simulation, 423

Index to Volume 1, 425
